UNIFIED APPLICATION

ShopEdge Software is the leader in providing highly adaptable, industry focused ERP solutions that streamline shop floor manufacturing from raw materials to finished goods for the Metal Stamping industry.

The ShopEdge Unified Application is the latest release in our application suite, bringing together our shop floor and business enterprise functionality into a single application. The application is developed using Microsoft's Blazor, an open-source application framework that can run in any web browser or as a native client application on most devices, providing extremely fast, almost native performance using a desktop or mobile form factor. And because Blazor is a modern front-end framework based on web standards, we can develop features quicker in an application with a beautiful user experience.

The ShopEdge Unified Application is a powerful enterprise tool for all users across a variety of platforms and devices. The Unified app is accessible on Android, iOS, Windows and a web browser which translates into flexible deployment options. Choose to deploy the app natively on a device or run through a web browser.

- Leverage existing hardware as the Unified Blazor application works on Android, iOS, Windows, macOS and through a web browser

- Easily manage updates for all devices

- Simplified on-boarding and training with a consistent application across all platforms

- Sleek, intuitive, user-friendly design and easy to understand navigation

- Feature-rich, robust application that covers all aspects of your business from capturing shop floor data to analyzing business metrics
