

SHOP FLOOR MESSAGING

ShopEdge Software is the leader in providing a highly adaptable, industry focused, ERP solution that streamlines shop floor manufacturing from raw materials to finished goods for the Metal Stamping Industry.

Stampers interested in improving visibility, efficiency and communication on the shop floor between operators and material handlers use real-time shop floor messaging.

Operators can communicate with material handlers directly indicating a need for raw materials, work in process, or a container drop-off or pick-up. Minimize production delays by making sure material is available when it is needed. Material handlers are notified immediately when a request is sent and live dashboards alert users when requests are waiting. Operators are notified when messages are received and requests are in progress.

Easily identify bottlenecks on the shop floor. Shop Floor Messaging is available on all ShopEdge products, including our Android application. The dashboard is browser based, so it can be deployed almost anywhere.

- Real-time, two-way communication between machine operators and material handlers.
- Minimize production downtime as required material drop-off and pick-ups are communicated immediately.
- Identify production bottlenecks caused by poor operator communication, inefficient material handling or other shop floor issues that cause unnecessary delays.
- Actionable metrics available including how long it takes to receive, start and complete a message request.
- Available on all ShopEdge products including Android.
